

## The Masimo transreflectance Sensor

The transreflectance sensor can be used anywhere the sensor can go through capillary and bounce off bone. The most popular place is the base of the tail. To use this sensor shave a small area from the base of the tail. Apply the lit part of the sensor to the shaved area. To keep in place you can use vet wrap or tape. To clean sensor apply a small amount of alcohol to a cotton ball and wipe clean. Never submerge sensor in water or any chemical substance. To store the sensor wrap cord lightly and store in a draw.
